## CITI'S TEXTILE & APPAREL CEO DELEGATION EXPLORES NEW OPPORTUNITIES AT ITMA

The ongoing ITMA 2023, the world's largest textile and garment technology exhibition in Milan, Italy from June 8th to June 14th, promises exciting avenues for the textiles and apparel industry and will feature over 1,700 exhibitors from 47 countries. Being highlighted are solutions for advanced materials, automation and the digital future and sustainability and circularity under the show theme, Transforming the World of Textiles.

Coinciding with ITMA'23, Confederation of Indian Textile Industry (CITI), one of the leading business chambers representing T&C value chain, organised the Indian Textile & Apparel CEOs Delegation with the

The CITI delegation at ITMA 2023 represented a dynamic collaboration between Indian textile and apparel CEOs, fostering innovation and driving sustainable growth in the industry. With a focus on digitalization and sustainability, the delegation aimed to seize new opportunities and strengthen international partnerships.

## INDITEX AND JEANOLOGIA DEVELOP AIR FIBER WASHER, DESIGNED TO REDUCE MICROFIBER SHEDDING IN TEXTILES

Inditex and Jeanologia have jointly developed Air Fiber Washer, the first industrial air system designed to extract microfibers during garment fabrication and thus reduce subsequent shedding in domestic laundering.

Microfibers are small particles with a length of less than 15 millimeters that are shed from textiles, especially during initial domestic washes. This is one of the great challenges for the textile industry due to existing limitations in current industrial capacities for water treatment.

Air Fiber Washer – which will be presented 8-14 June at the ITMA international textile technology fair in Milan – was created with the aim of reducing the release of

microfibers in initial washes thanks to a new industrial pretreatment that effectively removes these particles.

With innovative technology, this new development makes it possible to reduce microfiber shedding by up to 60% through the use of air

## TONELLO PRESENTS LAUNDRY REVOLUTION, THE WINNING CONCEPT THAT REINVENTS LAUNDRY

The Laundry (R)Evolution is the laundry concept of the present and the future, once again redefining standards and pointing the way for the evolution of the entire industry.

Only a few machines are needed to manage the entire production flow, which thus becomes even smoother and more lean, allowing productivity to be matched with the utmost care for the environment. New computer vision systems also control the cycle and thus make work even easier and safer.

At ITMA we will decline the concept of the new laundry around the three major "pillars" of our core business: THE Laser, washing and dyeing.

From the smallest and coolest THE Laser Lab, to THE Laser T, developed for horizontal working on a table that can be

divided into two sections and equipped with the latest version of our automatic garment detection system, B.O.P., which is even more powerful and precise.

We will then also present the novelty of THE Laser DUAL, designed for large productions and equipped with a double laser head for particularly effective and fast processing. It is in fact capable of processing both legs of the jeans simultaneously.

We will present three washing systems, from sampling, to production, in the All-in-One configuration, the concept of the "perfect machine," that is, equipped with all sustainable finishing technologies:

The new ozone treatment system that incorporates 3 technologies in one, allowing garments to be treated simultaneously on multiple machines, improving performance and further reducing consumption

# PROFESSIONAL WASTE HANDLING SOLUTIONS BY STEINEMANN CVS

With its brand name "Steinemann CVS (Central Vacuum System)," ConVacc AG offers the best possible solution for cleaning spinning mills, weaving mills, finishing mills and other textile plants. The professional, economic all-in-one system enables efficient removal of dust, lint, fly, fluff and fibers from machinery and premises alike.

**The Steinemann Central Vacuum System combines years of experience with Swiss quality**

ConVacc has over 40 years of experience in producing and planning Central Vacuum Systems. During this time, the company has successfully acquired more than 550 projects worldwide. Thanks to its outstanding quality, the Steinemann CVS is also very robust and durable, requiring truly little maintenance. This in turn makes it an efficient solution, ensuring a fast ROI. The only way to achieve higher efficiency, better product quality and less wear and tear is through cleaning of machines and environment professionally and in an acceptable timely manner.

The customizable plug-and-play system can be integrated into any existing infrastructure or machine. Its uncomplicated design enables customers to install the tube network themselves. In short, the Central Vacuum System is a must in central waste disposal and logistics solution. A ConVacc System can help optimize your production.

## COTTON EGYPT ASSOCIATION DEBUTS AT ITMA MILAN 2023

**Khaled Schuman, Executive Director of Cotton Egypt Association**

The Cotton Egypt Association (CEA), responsible for globally authenticating Egyptian Cotton, is exhibiting at ITMA (Booth H2-E203) for the first time this year. The CEA exhibition booth at ITMA is dedicated to promoting and preserving the authenticity and quality of Egyptian cotton, renowned worldwide for its exceptional characteristics. We cordially invite you to visit our booth and discover the remarkable characteristics of Egyptian cotton firsthand. Engage with our field experts and learn more about Egyptian Cotton and the Egyptian Cotton Logo License.

Established in 2005 as a non-profit organization, CEA's mission is to protect and promote the value-add of the Egyptian Cotton™ identity in supply chains end-to-end, under the supervision of the Ministry of Trade & Industry along with the Alexandria Cotton Exporter's Association (ALCOTEXA).

Through an exclusive partnership with Bureau Veritas, we provide testing and auditing services to verify Egyptian

Cotton™ at any stage of the supply chain. Our goal is to protect the Egyptian Cotton™ name and brand and reassure our consumers that Egyptian Cotton™ is 100% pure.

To eliminate falsely labeled goods from the supply chain, we employ traceability, total transparency, and a revolutionary DNA testing process that can recognize and identify the genomic fingerprint of Egyptian Cotton. We strongly encourage all accredited manufacturers to use the Egyptian Cotton™ logo to certify that their products are made of our 100% pure Egyptian Cotton™.

Our licensing program at CEA accredits merchandise made from 100% Egyptian Cotton. In fact, leading retailers worldwide insist that their manufacturers be accredited by CEA to guarantee the authenticity of Egyptian cotton products.

It's worth mentioning that Egyptian Cotton is globally recognized as the best cotton in the world. This is supported by a study we conducted in collaboration with PBM, the affiliate company of Home Textiles Today, in the United States, regarding the perception of US consumers of cotton. The study revealed that 89% of US consumers perceive Egyptian Cotton as the highest quality, and 61% are willing to pay a premium price for it. In summary, the Egyptian Cotton™ name stands for superior quality, softness, strength, and durability.

## GET TO KNOW THE **VALTECH GROUP** AT ITMA MILANO

Belgium based Valtech Group is a group of independent machine builders that bring state-of-the-art solutions in their area of expertise. The group is active in a wide range of industries, including the textile, automotive, hydraulic, and recycling industry. Valtech Group serves customers all across the world. Get to know the group at ITMA Milano, at booth A310 in hall 10.

The Valtech Group has a longstanding history in the textile industry, as have many of its companies. Therefore, the ITMA fair is an important platform to stay in touch with the market and to connect with customers.

This year, visitors to ITMA Milano can visit the Valtech Group booth in hall10, booth A310, to meet four of their companies active in the textile and recycling industry:

Valvan is a versatile and reliable supplier of sorting and baling systems. They create cutting-edge, all-encompassing solutions for the textile recycling and secondhand market. Supply systems, baling presses, sorting systems, and more are all part of their extensive suite of automated and semi-automatic solutions.

## LAWER LAUNCHES RANGE OF AUTOMATIC COLOR KITCHENS

The product range offered by the company for the global market includes complete automatic colour kitchens, able to automatically prepare powder and liquid recipes used in the textile dyeing process

Italy-based Lawer SPA, known for its advanced dispensing systems for the textile industry, is all set to hog the limelight again at ITMA 2023 with a new launch. Speaking exclusively to The Textile Magazine, the company's Managing Director Filippo Lanaro said he felt pleased with Lawer's performance in 2023 so far. "The period already passed and the expectation for the rest of the year 2023 are positive with revenue growth and

expansion into already established markets such as China, India and Pakistan and new territories such as Vietnam," he said. According to Lanaro, the product range offered by the company for the global market includes complete automatic colour kitchens, able to automatically prepare powder and liquid recipes used in the textile dyeing process.
